Bandstand Stage Rental

Quick and easy to erect and dismantle, self supporting and freestanding the bandstand provides the perfect temporary stage structure for a variety of events.

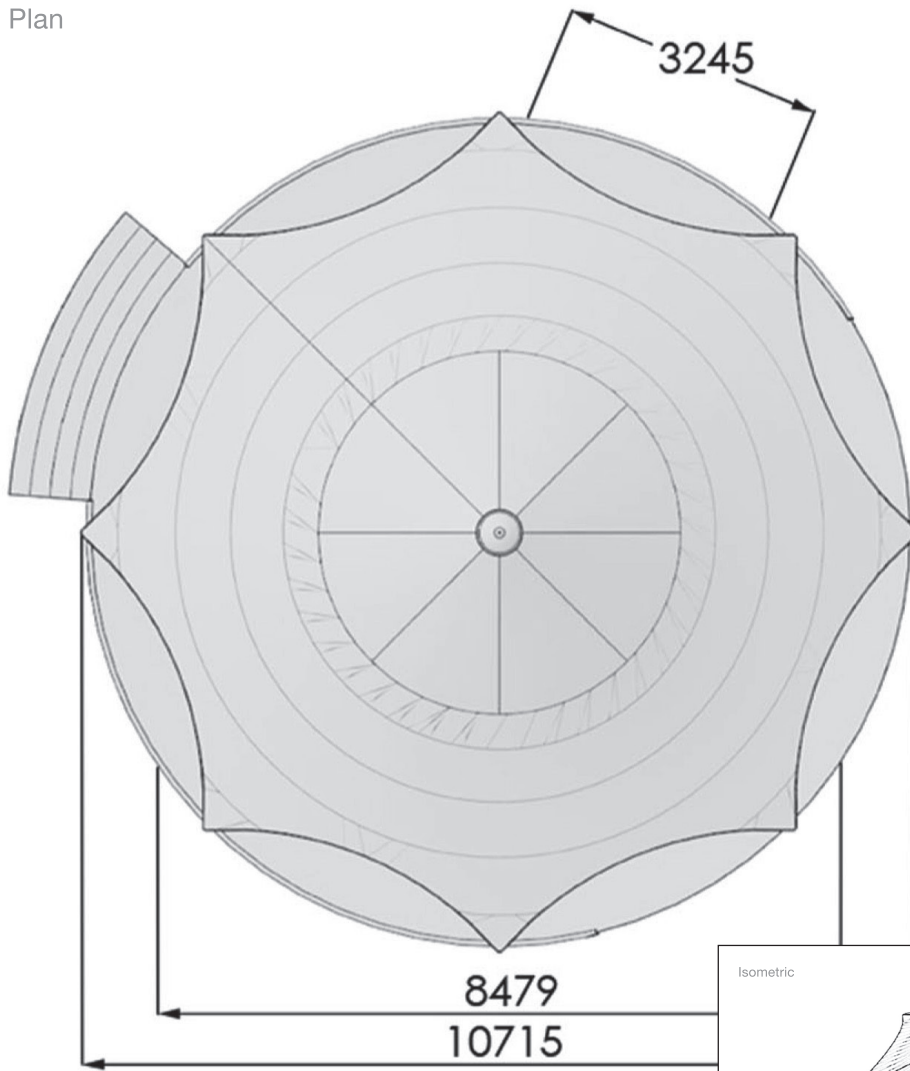

The structure provides an 8m internal and 10m covered area and is built on standard or custom steel decking with handrails or can be built on the ground without a deck. The sides are open all round or can be partially covered to form a backstage and the eave height is 2.6m. The structure has a 1 ton loading weight for lighting and production. Currently there are two roof sheets available (green or white).

"This was a great stage to play on, well designed and more intimate, inclusive and the sound and light were amazing... the crowd seems to enjoy this sort of stage better than the big stages. It's what festival events are about, having these quirky set-ups you can stumble on and provides great platform for an impromptu second gig..."

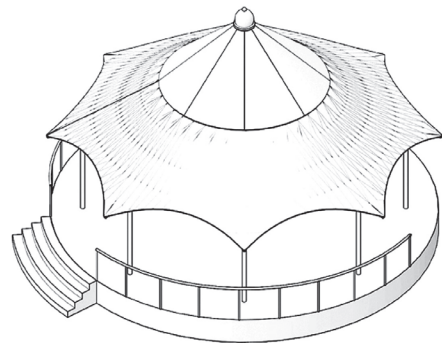

Bill Amberg, designer and musician with Police Dog Hogan
